MX-30 Submersible Mixer - Installation and Maintenance Manual

The MX-30 is a submersible mixer with a planetary gearbox, designed to keep activated sludge in suspension.

Technical data

Parameter	Value
Motor power	3.0 kW
Rated current	6.8 A
Propeller diameter	300 mm
Propeller speed	475 rpm
Weight	78 kg
Maximum liquid temperature	40 degrees Celsius

Installation

Install the mixer on its guide rail so that the propeller is at least 0.5 m below the minimum liquid level and at least 0.4 m above the tank floor.

Never run the mixer out of the liquid for more than 30 seconds.

Alarm codes

Code	Description	Action
M-11	Leakage in oil chamber	Warning; replace the mechanical seal within 14 days
M-12	Motor overtemperature	Trip at 140 degrees Celsius; check submergence and propeller for fouling
M-21	Overcurrent	Trip above 115% of rated current; remove rags from the propeller

Maintenance schedule

Change the gearbox oil every 8,000 operating hours or every 24 months, whichever comes first, using 0.9 litres of gear oil ISO VG 220.

Inspect the propeller and the lifting chain every 6 months.
